DETAILED ACTION

This application filed August 30, 2001 claims benefit to foreign applications: 2000-50881, filed August 30, 2000; 2000-65629, filed November 6, 2000; and 2001-12485, filed March 10, 2001 each filed in Korea.

Claims 1-31 are pending and currently under examination.

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14, 25, drawn to a method of establishing undifferentiated human embryonic stem cells in culture and the isolated undifferentiated human embryonic stem cells, classified in class 435, subclass 325.
- II. Claims 15-21, drawn to method of thawing a cryopreserved human embryo,classified in class 435, subclass 1.1.
- III. Claims 22, 23, 26, drawn to a method of isolating inner cell mass of a human blastocyst embryo by treating with anti-human lymphocyte antibody and the isolated inner cell mass cell, classified in class 435, subclass 325.
- IV. Claim 24, drawn to method of establishing undifferentiated human embryonic stem cells from inner cell mass cells by culturing in a medium capable of

Application/Control Number: 09/944,448

Art Unit: 1632

sustaining undifferentiated embryonic stem cells, classified in class 435, subclass 1.1.

Page 3

V. Claims 27-30, drawn to a method of differentiating a human embryonic stem cell in culture and the isolated differentiated cell, classified in class 435, subclass 1.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, III, IV and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to distinct methods for making different types of cells, undifferentiated (groups I, III, IV) and differentiated (group V). Practicing each of the methods requires different materials for the culture and results in a unique product which are different.

Inventions I and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to methods requiring different steps and materials to practice. Though each method may result in a similar type of cell, the specific methods used to obtain the resulting cell require different starting materials and unique and distinct method steps.

Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different

Application/Control Number: 09/944,448

Page 4

Art Unit: 1632

inventions are drawn to methods requiring different steps and materials to practice. Further, each method results in a different cell type, an undifferentiated human embryonic stem cell (group I) and an inner cell mass cell (group III).

Inventions II and I, III-V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to methods requiring different steps and materials to practice. The specific methods used require different starting materials and unique and distinct method steps. Though the method of group II may be used in the method of group I, other methods of thawing exist and may be used to practice group I.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper. Further, because these inventions are distinct for the reasons given above and the search required for each on of Group I-V is not required or coextensive with each other, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Application/Control Number: 09/944,448

Art Unit: 1632

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph Woitach whose telephone number is (703)305-3732.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Deborah Reynolds, can be reached at (703)305-4051.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group analyst Dianiece Jacobs whose telephone number is (703) 308-2141.

Papers related to this application may be submitted by facsimile transmission. Papers should be faxed via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The CM1 Fax Center numbers are (703)308-4242 and (703)305-3014.

Joseph T. Woitach
